

GAS FIRES 2025

MADE IN BRITAIN

Welcome to Global

At Global Fires we know how important it is to create a stylish and relaxing living environment. That's why we've developed this collection of versatile and affordable gas fires to complement all tastes and lifestyles.

I believe our success stems from a combination of innovative design, investment in technology and the highest quality manufacturing standards. As a result all Global fires carry a 5 year warranty to reflect my belief in their quality and durability, and our experienced Global retailers are hand-picked to give you the very best advice and service.

This brochure has been designed to make the purchase of your new Global fire as simple as possible. I hope you will find it both informative and inspiring.

Loud Twas

Today BFM Europe is the fastest growing domestic fire producer in the country with an unequalled reputation for quality and services. Every Global branded gas fire is designed and developed in our ultramodern purpose built, British manufacturing facility in Stoke-on-Trent.

5 Year Warranty

Global gas fires carry a 5 year warranty, subject to terms and conditions.

Product Testing & Certification

All our gas fires are independently tested, approved and verified by the British Standards Institution (BSI) to meet the latest standards for performance, safety and efficiency.

BSI is a completely independent organisation, free from the influence of government, industry, or shareholders. This independence ensures that their testing and certification are fully objective, giving their assessments a level of authority that other organisations can't match.

Their staff are among the most experienced and knowledgeable in the world, and their technical expertise in gas and electrical product testing is internationally recognised. This, combined with their extensive testing facilities, guarantees that our products are put through rigorous assessments with the highest level of integrity.

Ecodesign compliant

This logo signifies that the product is fully compliant with the Eco design directive Commission Regulation (EU) 2015/1188.

Tested & Approved
Conforms to GB legislation

2

Using this brochure

Before you begin, please view page 6 to confirm your chimney/flue type and the most suitable control. You can then use the icons on each product page to find a fire that's right for your home.

Unless noted otherwise, our inset fires include a Profiled trim in your choice of brass, chrome, satin silver, or black. You can also upgrade to a different trim or a more modern fascia, and you can customize your fire with one of our traditional or contemporary fret designs.

See pages 16-19 to find all suitable accessories.

highefficiency

Our high efficiency range combines exceptional heat output with lower running costs.

Our key objective is to develop energy-efficient gas fires that help reduce consumer heating costs. Our developments focus is on innovative solutions that save energy without sacrificing performance.

Conventional Flue Fires

Glass Fronted Fires

Open Fronted Fires

Our conventional flue fires are up to 86% efficient. The glass front and unique heat exchanger work together to direct both radiant and convected heat into your room, minimizing heat loss up the chimney.

Our open-fronted conventional flue fires are up to 68.3% efficient, offering the look and feel of a real fire. They produce both radiant heat from the fuel bed and convected heat from a built-in heat exchanger, warming your room effectively.

Balanced Flue Fires

93.5% energy efficiency

Glass Fronted Fires

Our high-efficiency balanced flue fires are up to 93.5% efficient. Perfect for homes without a chimney, these glass-fronted, room-sealed appliances use a dedicated flue to vent directly through an outside wall, drawing in and expelling air for combustion.

standardfires

Conventional Flue Fires

Open Fronted Fires

Standard fires can achieve a direct heat output of up to 2.7kW. It is recommended that these products are not suitable for use as a primary heat source, but are ideal if you are looking for a great fireplace feature for occasional use.

Before you begin...

Type of Chimney or Flue

The type of fire you can have is determined by your chimney or flue. Use our simple guide to identify your chimney type by looking at your roof. Remember, while a full-depth fire typically needs a traditional chimney, a slimline fire can fit most chimneys and flues.

Brick Chimney

Except for our "no chimney" products, Global fires are compatible with brick chimneys, which are easily identified by a chimney stack and a terracotta pot or gas terminal on your

Pre-Fabricated Flue

Pre-fabricated flues are easily identifiable by a metal flue and terminal on the roof and a metal flue box behind the fire.

Pre-Cast Flue

Pre-cast flues can be identified by a ridge vent or metal flue tube and terminal on the roof. Constructed from concrete or clay blocks they form a rectangular section flue. All Global fires featuring this icon are only suitable for pre-cast flues conforming to BS EN 1858.

Can't see a Chimney or Flue?

If you can't see a chimney or flue like the ones described above, then you will require a Balanced Flue fire.

Balanced Flue

Balanced Flue fires use a horizontal pipe to vent directly outside. An electricity supply is not required for Balanced Flue products.

Controls

The simple, discreet control system is located at the bottom of the fire, behind the fret or fascia. Once lit, you can adjust the flame height and heat output by rotating the control knob.

Slide Control

This convenient control is located on the top right-hand side of the fire. Simply push and hold the lever down to ignite it, then move it up or down to adjust the flame height and heat output.

Easy Flame Control (EFC)

Discreet, easy access buttons are used to ignite the fire and adjust heat and

Remote Control

The remote control handset is used to light the fire as well as to adjust the flame height and heat output.

Remote Control with Thermostat

Use the remote to light the fire, adjust the flame height, and control the heat output. It also includes a thermostatic feature to regulate your

Fuel Bed Effects

Back Panels

you will have natural gas.

highefficiency Glass Fronted

Delta HE

This portrait hole-in-the-wall fire features a striking chrome fascia and a 3.4kW heat output. The Delta HE wall inset is the ideal solution for smaller rooms where space is at a premium.

The glass fronted Delta HE is operated by thermostatic remote control and comes with a coal fuel bed.

WARNING BFM Europe Limited is a Gas Safe Register company. We recommend that all of our fires are installed by Gas Safe Register engineers in accordance with our instructions. DISCLAIMER Our policy is one of constant development and improvement. We therefore reserve the right to revise designs and specifications of our products without formal notice, patents pending. We always recommend our products be viewed in an approved showroom before purchase. Whilst we have taken every care in the preparation of this brochure it is not intended to replace the installation manual which provides more detailed information. Photography is for illustration purposes only and although every effort has been made to ensure accurate reproduction of typical installations and flame pictures they may vary according to fire model and flue types. We accept no liability for any loss or damage arising directly or indirectly from the use of this brochure. We recommend that all our fires are used in conjunction with central heating and not as a primary source of heat. In the interests of personal safety a suitable fireguard is recommended when children, the elderly and the infirm are present. (This brochure is copyrighted and must not be reproduced in whole or in any part without prior written permission).
