

Electriflame DLX 1250

Natural Oak Fuel-bed Layout

Layout Contents

NOTE: The logs have been selected and identified specifically for the following layout however, the layout is completely customisable and can be arranged as desired.

Prefer to follow a video instead?

Scan this code for our walkthrough video on how to arrange the logs.

Suggested Log Layout

As previously mentioned, the layout of the logs is completely customisable and can be arranged as desired however, please see steps 1 - 17 below for our recommendation.

Position **Log A** in the centre of the fuel bed. Make sure it is pushed back close to the rear screen.

Add the large chips either side of **Log A** ensuring the chips are spread evenly. *Retain a small quantity (minimum half a bag) to be used later in **Step 16**.

Finishing Touches...

Large Wood Chips

Carefully add the "Small wood chips" **(15)** around the edges of the fuel bed.

Note: - Take extra care to minimise dropping any of the chipping in the gap / Glass retaining channel at the front of the fire.

Small Wood Chips

15

16

Now add a few extra pieces of the large wood chip on top of the small wood chips. This helps to create a more natural finish.

17

Clear the glass retaining channel of any 'Chippings' that may have dropped in. Re-install the glass...

... sit back and **marvel** at your creation!

All Done!

SHARE IT!

Go on, its time to brag! We'd love to see your masterpiece. Share it on social media. Don't forget to use the hashtags
